

Tree Guard 4-Point Tie Kit

Product Overview

The GBU Tree Guard Tie is designed as a premium adjustable restraint system which blends in very neatly with the Tree Guard and surroundings.

This prevents trees from sustaining damage in high winds against the side of the Tree Guard, and can be used to encourage a slightly misaligned tree towards a more upright growth pattern which is often very important in the urban realm. This is supplied as standard with most GBU vertical tree guards.

Features

- 4-Point restraint
- Black nylon webbing
- Steel brackets

Benefits

- Adjustable
- Encourages upright growth pattern
- Prevents damage to the tree
