

RootRain ArborDrench

Slow release irrigation for newly planted

Overview

GreenBlue Urban's RootRain ArborDrench is designed to slowly release water to the immediate root ball zone of newly planted trees from 1" to 8" in girth, enabling their healthy establishment. The ArborDrench will allow the water to penetrate the ground immediately above the tree rootball.

RootRain ArborDrench is ideal in situations where maintenance issues are likely to cause premature failure of newly planted urban trees - ensuring that they have access to water during hot weather.

Features

55 Litre water capacity
Zip allows multiple bags to be fitted together

Benefits

Visible management - instantly see when the water has run out
100% water absorption with no run-off
Can be used with chemical additives
Combined multiple bags for larger trees
Can be filled in minutes
Installation does not require tools

Product code	Code	Description	Capacity
	GBUAD50L	RootRain ArborDrench	55 litres

Assembled Illustration

Single assembly

Double assembly

Installation

Simply wrap the ArborDrench around the tree and zip securely
For a double ArborDrench application zip two together, wrap them around the tree and zip the second zip securely

Maintenance

Periodic inspection for damage, replace if required
